

Database engineering with PHP

week 2

1.1 Assignment 1

Create a web application in which the user can upload a number of files. In this application it is also possible to view the files and maintain the files.

1.1.1

Create a page in which users can upload files. This upload page allows the user to place a file on a server environment through an upload functionality.

The file must meet the following conditions:

- The file must be an image of the .png, .jpeg, .jpg, or .gif format.
- The file must not exceed 3MB.
- The original file name must not exceed 50 characters and must contain at least 1 uppercase.

1.1.2

Create an overview page on which all files are shown per file type. This means that there is a summary page for all jpeg's and a separate one for all png's, etc.

The overview page should have some minimal styling. Create a nice overview.

This summary page has the ability to delete the files.

Tip: Look at the function "unlink()" on php.net
